

## BODY-MASS INDEX (BMI)

## BLOOD PRESSURE (BP)

## DIABETES

## HEIGHT

## PROJECTIONS FOR 2025

	Estimated prevalence in 2010		Projection for 2025		Probability of meeting global target	
	Women	Men	Women	Men	Women	Men
<b>Obesity</b>	7.4% (4.8-10.7)	5.5% (3.3-8.3)	11.2% (5.6-19.4)	11.6% (5.3-20.9)	3%	0%
<b>Diabetes</b>	5.9% (3.5-9.2)	7.5% (4.4-11.3)	6.6% (1.8-16.3)	10.4% (2.7-25.9)	53%	29%

## NOTES

- We use age-standardised estimates for adults 20 years and older for BMI and 18 years and older for other risk factors, and estimates for children and adolescents aged 5 to 19 years.
- For all line charts, the solid line represents the trend for the selected country, and the dotted line represents the global trend. The shaded areas represent the 95% uncertainty intervals.
- Raised BP is defined as SBP  $\geq$ 140 mmHg, or DBP  $\geq$ 90 mmHg.
- Diabetes is defined as fasting plasma glucose  $\geq$ 7.0 mmol/L, or history of diagnosis with diabetes, or use of insulin or oral hypoglycaemic drugs.
- Global target for obesity and diabetes is to halt, by 2025, the rise in the age-standardised adult prevalence at their 2010 levels.
